

Data Analytics Challenge July 2026

Official Business Brief & Participant Guide

GlowMart Nigeria Ltd | Sales & Inventory Intelligence | FMCG Beauty & Personal Care

Challenge	SkillAhead Data Analytics Challenge July 2026	Organized by	SkillAhead Data Academy
Industry	FMCG, Beauty & Personal Care Retail	Dataset Period	2022 – 2024 (3 Years)
Submission Deadline	Thursday, 28th June 2026	Coordinator	Coach Anietie @etukanietie

1. About This Challenge

The SkillAhead Data Analytics Challenge is a real-world, project-based assessment that gives analysts the opportunity to work on a simulated business case modelled after a mid-size FMCG beauty and personal care retail company operating across five Nigerian cities.

Participants will receive a complete business dataset, a business brief describing a real management conflict, and a KPI reference guide. Their task is to build a professional analytics solution, a dashboard or report, that resolves the conflict and answers the business questions using data.

2. The Business Scenario

Company: GlowMart Nigeria Ltd

GlowMart Nigeria Ltd is a mid-size FMCG beauty and personal care retailer with 500 customers, 90 products across 4 brands, and operations in Lagos, Abuja, Kano, Ibadan, and Port Harcourt. The company has recorded 15,000 transactions between 2022 and 2024.

The Conflict

Emeka Okafor (Sales Manager)

"My team is losing sales because Inventory is not stocking the right products in the right cities. Port Harcourt and Kano customers are ready to buy, but the shelves are empty."

Tunde Adeyemi (Inventory Manager)

"I stock based on what Sales tells me to plan for. Nobody gave me updated numbers. My records show equal allocation across all five cities, show me the data."

The MD, Mrs. Chidinma Eze, stepped in and commissioned the Head of BI & Data Analytics to build a single dashboard that resolves this conflict with evidence, and guides future inventory allocation decisions.

3. Dataset Overview

The dataset provided contains four related tables that must be connected in a star-schema data model:

Table	Primary Key	Role	Key Columns
Sales (Fact)	SalesID	All transactions	CustomerID, ProductID, OrderDate, Quantity, Unit Price, Discount, Total Sales
Customers	CustomerID	Who bought	City, Region, Gender, Age Group
Products	ProductID	What was bought	Brand, Cost Price (90 products, 4 brands)
Date	Date	Time intelligence	Year, Month, Quarter, Day of Week

Data covers: 500 customers · 90 products · 4 brands · 5 cities · 15,000 transactions · Price range NGN 1,000 – NGN 20,000 · Discount 0% – 20% · 1 – 5 units per order.

4. Your Task

Using the dataset provided, build a professional analytics solution that:

- Connects the four tables in a correct data model (star schema)
- Calculates the required KPIs and metrics (see Section 5 and the KPI Reference Document)
- Presents the findings in a clean, well-designed dashboard or report
- Resolves the Sales vs. Inventory conflict with data-backed evidence
- Provides at least three business recommendations supported by the analysis

5. Required KPIs & Metrics

Your solution must include, at minimum, the following KPIs. Full formulas and thresholds are provided in the KPI & Metrics Reference Document included in your resource pack.

#	KPI / Metric	Business Question Answered	Category
01	Total Revenue	How much did GlowMart earn across all cities and brands?	Core Revenue
02	Gross Profit & GP Margin %	Are we making enough profit after cost of goods?	Profitability
03	Total Transactions	How many orders were placed, and is frequency growing?	Volume

#	KPI / Metric	Business Question Answered	Category
04	Avg Order Value (AOV)	How much does a single customer spend per visit?	Efficiency
05	Total Units Sold	How many product units moved across all transactions?	Volume
06	Revenue by City	Which city drives the most revenue, and deserves more stock?	Geographic
07	Revenue by Brand	Which brand is the strongest performer by city?	Brand
08	Total Discount Amount	How much revenue was given away through discounts?	Discount
09	YoY Revenue Growth %	Is the business growing year-on-year?	Growth
10	Transactions per Customer	How frequently do customers return to buy?	Loyalty
11	Revenue per Customer	What is the average 3-year value of one customer?	Customer

6. Resources Provided

Every registered participant will receive the following three resources upon registration confirmation:

#	Resource	Description
01	Business Brief	This document, the full scenario, dataset overview, task description, judging criteria, and submission instructions.
02	The Dataset	The GlowMart Nigeria Ltd dataset, an Excel workbook with four sheets: Sales (15,000 rows), Customers, Products, and Date table. Ready for direct import into your analytics tool.
03	KPI & Metrics Reference	A detailed reference document listing all 11 KPIs with their business questions, arithmetic formulas, DAX measures (for Power BI), threshold benchmarks, and the actual dataset values, built to guide your analysis.

7. Eligibility

To participate in this challenge, you must meet the following requirements:

- You must have completed at least one level of a data analytics programme with SkillAhead and hold a valid certificate.
- Your SkillAhead certificate must be visible or mentioned in your LinkedIn submission post.
- Submissions without a verifiable certificate will be disqualified.

8. Accepted Tools

You may use any of these data analytics tools to complete your project:

Tool	Notes
Microsoft Excel	Dashboard using PivotTables, charts, slicers, and formulas. Must include at least one interactive element.
Power BI	Full dashboard with DAX measures, data model relationships, and interactive visuals. Preferred tool.
SQL / MySQL	Queries that produce all required KPIs, plus a written or visual presentation of findings.
Tableau	Interactive dashboard published to Tableau Public. Share the public link in your post.

9. Judging Criteria

All submissions will be evaluated by a panel using the following weighted scoring framework. Total score: 100 points.

Criteria	What We Look For	Weight
Insight Quality	Accuracy of KPIs, correct data model, relevant findings that directly answer the business questions.	40 points (40%)
Visual Design & Dashboard	Clean, readable layout; appropriate chart types; consistent colour use; professional presentation.	25 points (25%)
Business Storytelling	Clarity of narrative, conflict resolution with evidence, and quality of business recommendations.	25 points (25%)
Technical Execution	Correct use of tool features: DAX / formulas / SQL / calculated fields as appropriate to the tool used.	10 points (10%)

Tip: The highest-weighted criterion is Insight Quality (40%). Make sure your KPIs are correct, your data model relationships are properly set up, and your analysis directly addresses the Sales vs. Inventory conflict.

10. Prizes & Rewards

Top 5 Analysts

Each of the top 5 ranked analysts will receive a **100% full scholarship** to the SkillAhead Data Academy, Data Science and Machine Learning Virtual Class.

Best Analyst, Grand Prize

The #1 ranked analyst will additionally receive a **100% full scholarship** to Coach Anietie's next Mentorship Programme, 90 Days of personal coaching, live sessions, and career guidance.

Prize winners will be announced via SkillAhead's official social media channels and contacted directly via LinkedIn within 5 business days after the submission deadline.

11. How to Submit

Submission Deadline: Thursday, 28th June 2026

Late submissions will not be accepted under any circumstances.

Follow these steps exactly to submit your work:

1. Publish your completed project on LinkedIn on or before 28th June 2026.
2. In your LinkedIn post, include all three of the following tags:

Type	Tag / Handle	Purpose
Page Tag	@SkillAhead	Tags the SkillAhead page so we see your post
Person Tag	@etukanietie	Tags Coach Anietie directly
Hashtags	#SkillAheadChallenge #JKBChallenge	Makes your post discoverable for the judging panel

3. In your LinkedIn post, make your SkillAhead certificate visible, either attach an image, display it in your dashboard screenshots, or mention it clearly in the post caption.
4. Your submission must be public, set your LinkedIn post visibility to 'Anyone' before posting.

12. Tips for a Winning Submission

- Set up your data model correctly first, all analysis flows from proper relationships between the four tables.
- Start with the conflict resolution angle, the business scenario is your story. Make it clear how your data answers the Sales vs. Inventory debate.
- Use the KPI Reference Document, it gives you the exact formulas, thresholds, and interpretation guidance for all 11 required metrics.
- Design matters, a clean, well-organized dashboard with consistent colours will score higher than a cluttered one, even if the numbers are correct.

- Write at least 3 recommendations, go beyond charts. Tell the MD what GlowMart should do next, and back it with numbers.
- Post early, do not wait until June 19th. Technical issues on deadline day are not grounds for extension.
